

PORTWARE Strategy Server

HIGH PERFORMANCE ALGORITHMIC SOLUTION

PORTWARE'S STRATEGY SERVER is a powerful, event-based algorithmic engine designed for high-volume, high-frequency automated order management and trade execution.

Because You Are

A quantitative hedge fund, buy-side or sell-side institution who needs a technologically advanced algorithmic engine for high-frequency, data-intensive automated order management.

SPEED/PERFORMANCE

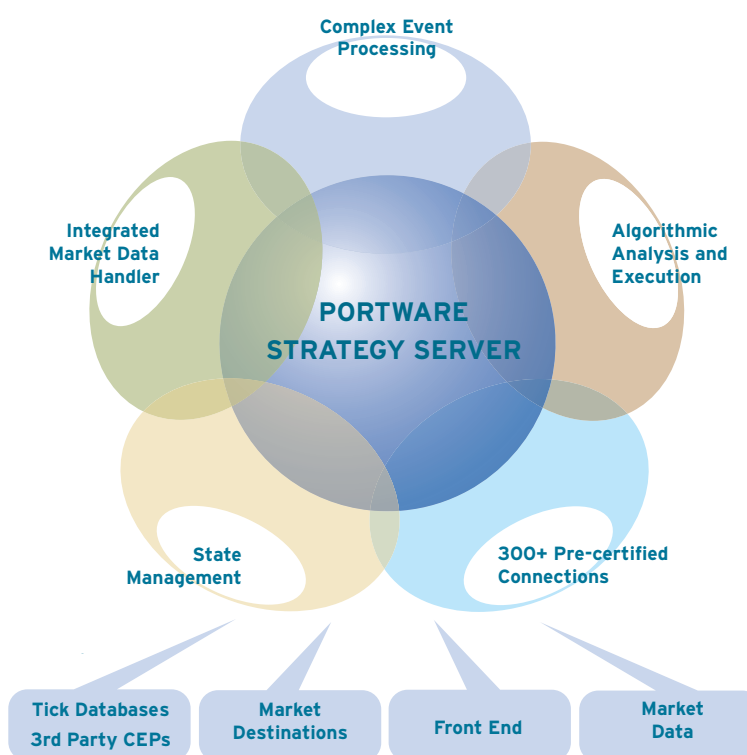

Handle a massive amount of message traffic and support data-intensive trading models with industry-leading throughput capacity in a fully developed automated trading environment.

FLEXIBLE DEPLOYMENT

Deploy trading strategies in a dedicated, highly secure trading environment, either as a black-box solution or in tandem with Portware Enterprise.

COMPLETE TRADING SOLUTION

Run complex strategies in a dynamic trading environment, including pre-certified connections to 300+ global trading destinations.

Because You Need

COMPLEX EVENT PROCESSING (CEP)

A high-frequency CEP engine that can address the needs of your most data intensive automated trading strategies while operating as part of a complete, multi-asset automated trading solution.

OPEN ARCHITECTURE

A complete trading solution with an open API to build, test and run proprietary or third-party algorithmic trading models.

MARKET DATA SUPPORT

Robust, integrated feed handlers for every market data provider, as well as unprecedented support for the integration and normalization of proprietary data feeds.

EASE OF INTEGRATION

Seamlessly integrate Strategy Server with third party and proprietary trade workflow applications.
